

Mobile parts racks

Reduces frequent, awkward lifting and pinch grips

Description

Small and medium sized parts often require processing during sub-assembly, which can result in multiple lifts and frequent handling. To reduce frequent, awkward lifting and handling parts with pinch grips, Aladdin Hearth Products, a Colville, Washington stove and fireplace insert manufacturer uses mobile storage racks to move parts from one process to another.

Custom-built mobile racks place parts at a good height and provide easy access to all sides.

Lightweight carts can also serve as mobile workstations for small parts.

Larger, heavier parts can be moved and worked on using a mobile scissor lift.
